

Binger Seilzug

Leaf Remover

EB 490

The BINGER defoliator EB 490 for viticulture is newly developed. Two rollers turn in opposite directions to pull leaves in the grape cluster zone.

A suction blower supports this process. One roller is made from plastic and shaped in a special way to create the suction effect. The second roller is made of an extreme flexible material.

For one-sided operation a 180 degree reversible set up is available. It can be mounted to the hydraulic side shift of the BINGER hydraulic lift base for leaf cutting.

Two horizontal guides ensure a safe distance from vines and posts to prevent damage without the use of an expensive parallelogram guidance system.

An adapter set up for ERO hydraulic lift is also available. The defoliator can be opened without tools for easy cleaning.

The BINGER system works very gently around the clusters, because no mechanical cutting knives are used.

Speed	Weight	Hydr. Oil	Pressure	Height
2,5-3,5 km/h	70 kg	16 Liter	80 Bar	49 cm
1,5-2,0 mph	150 lbs	4 Gal.	1200 PSI	19 "
