

Leaf Cutter Modul Line

The Perfection for your vineyard

Some of the ERO- Stainless Steel Leaf- cutter's best features are the stainless steel cutter bar design, its extremely precise cut and its individual flexibility. Due to its modular and therefore very flexible conception the leaf-cutter can be modified for special requirements by extending or adapting. In addition, an optional row guide prevents a cutting into the grape zone and facilitates the operator a relaxed work.

For ERO as a practical enterprise the leaf-cutter is a measure of success and innovation. Even in 1970 ERO set a new standard with the introduction of the free-cutting principle.

Following this tradition many innovations were realized in the actual model of the ERO-Stainless Steel Leaf-cutter which supports the grape grower's work

A special process is used to build turbo blades (registration of design) and ensures an extremely precise cut. The cranked knives create a suction which catches even very small branches and leafs.

In order to gain the precise cut the rotary cutters are arranged with an intersection of 40 mm. So even the slipping through of young branches is prevented.

The highest standard of comfort for operating the leaf-cutter is provided by the Joystick control.

A starting safety device adjustable by the operator prevents damaging the machine.

A special hydraulic horizontal swing simplifies working in sharp pointed rows.

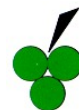

To leave a row the leaf-cutter will be swung up in direction. The machine is controlled from the drivers seat and is therefore very easy to handle.

Options:

- Joy stick Controls
- Hydraulic swing arm for sharp pointed rows
- 45° Under Cutter knife
- Hydraulic tilt on base
- Hydraulic tilt on cutter bar

Hydraulic set up on the Tractor:

- Two single acting hydraulic valve
- One pressure free return line in to your hydraulic oil reservoir
- One electric 12 V plug
- Hydraulic Oil flow 15 l (4 Gal.) / per minute
- Hydraulic Oil pressure min. 175 bar / 2750 PSI
