

Binger Seilzug

Pre Pruner VSL07

The Pre Pruner from Binger Seilzug can be used in nearly all vineyards on this planet. It does no matter if spur-pruned or cane-pruned, with a range from 8 ½" to 53 "(21 to 135 cm) there is always the right model to find for your vineyards.

The new VSL07 models can be fitted to the already known hydraulic lift system from Binger Seilzug.

Because of the extreme low weight, the most compact model can be mounted even to the light duty hydraulic lift MD from Binger Seilzug.

The low weight design makes it possible to use the pre pruner also on extreme slopes mounted to tractors especially designed for these conditions.

The Binger VSL 07 is a new generation Pre Pruner from Binger Seilzug. This new light weight pre pruner is the result of more than 20 years experience in worldwide use.

With two basic models available, developed in a modular system you will always find the right solution for your specific pruning needs.

While the version VSL07 D uses high quality saw blades, a new developed disc is used on the VSL07 P for a reliable job in the vineyard.

Working speed:	2,5 - 3,5 km/h; 1,5 -2,0 mph
Weight: approx.	70 kg; /160 lbs; without rotator
Demand for oil approx.	14 liters / 4 Gal.
